RE: FCC Labelling Requirements
FCC ID: VJPFNVMS4001

The following label information is required by the FCC Rules and Regulations for certified devices. Also attached, please find marketing information required by the FCC Rules and Regulations. We have concluded that the device is too small for the full FCC statement to be permanently placed upon it in a manner that will be legible. The only surface available is the front panel where clearly this would be aesthetically incorrect and also impair operation of the device. Such a placement would be inappropriate and restrict operation of the device. To this end the FCC statement is carried in the product user manual.

Technical: The label material is HERMA PP white tc (970), white glossy, opaque polypropylene film, biaxially orientated with special surface treatment for better printability and is printed by a permanent silk screen process. The adhesive used is permanent transparent acrylic based.

Thank you for your attention to these matters.

Yours faithfully
